SELECT ROUND(8, -2); --> Output 10
SELECT ROUND(8, -3); --> Insufficient digit
```

Javascript format currency without decimal. Javascript number format decimal places. Javascript round number no decimals. Javascript does number have decimals. Javascript format number 2 decimals without rounding. Javascript short number format.

You can switch: a number as a string or numeric type. Select Parsename (converts (Varchar, Cast ('2334442221.345222' as money), 1), 2) Formatting of floating point numbers is a common task in software development and Java programming is no different. For example 12345.6 formatted like 0.### will be shown as 12345.6. But 12345 will be shown as 12345. and 12345.6789 will be shown as 12345.679, since the format is for a maximum of 3 decimals. You can add other characters at the beginning, in the middle or at the end. It is used in the fractions, see below). Here are some examples: How to format numbers as fractions You can also format the numbers as fractions. You can use it to decide how many decimal places, for dragging 0 or 0s à €
